                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score

These epitopes were obtained at different stages of the life cycle of P. falciparum. CDC/NITMALVAC-1 vaccine has antiparasitic activity and can used for treatment and prevention of malarial infections. Anti-CDC/NITMALVAC-1 antibodies can be used for detecting P. falciparum in biological samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel recombinant protein as vaccine for treating malarial infection comprises antigenic peptides obtained from different stages of plasmodium falciparum life cycle \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is the antigenic epitope P594, derived from circumsporozoite protein (CSP) of the sporozoite stage of Plasmodium falciparum. It is used in the construction of recombinant protein CDC/NIIMALVAC-1, which is a multivalent, multistage malarial vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim

The DNA encoding the 1st 81 AAs of the N-terminal of NS1 (NS1_81) is linked via a synthetic sequence to DNA encoding Region I contg. flanking regionless the 18 AA signal region, which in turn is fused to DNA encoding Region II-contg. flanking regionless the 18 AA signal region is designated RLIGelta9. The Pro residue separating the Asp (at the C-terminal AG. This CS fusion is designated for the linker) from RLIGelta9 is an artifact of a filled in BamHI

The DNA encoding the 1st 81 AAs of the N-terminal of NSI (NSI.81) is linked via a synthetic sequence to DNA encoding Region C (OSI.81) is linked via a synthetic sequence to DNA encoding Region C (I contg. flanking regionless the 18 AA signal region, which in turn is fused to DNA encoding Region II-contg. flanking region. C This CS fusion is designated RLfAuth. The Pro residue separating C the Asg (at the C-terminal of the linker) from RLfAuth is an artificat of a filled in BamHI site; the Gly separating Region I and C Region II-contg. CS flanking regions is an artifact of a synthetic profit on parise the large of the synthetic can be used in a vaccine for profection against malaria.

                                                                                                                                                                                                      QΥ
                                                                                                                                                                                                                                                                                                                       the polypeptide is prepd. by genetic engineering of genes encoding the p falciparum circumsporozoite (CS) protein [Dame et al., Science 225: 593 (1984)], and the influenza virus non-structural protein 1 (NS1), [Baez et al., Nucleic Acids Research, 8: 5845 (1980)]. The DNA encoding the 1st 81 AAs of the N-terminal of NS1 (NS1,81) is linked via a synthetic sequence to DNA encoding Region I conty, flanking region less the 18 AA signal region. This is linked to a synthetic sequence encoding two repeat units from the immunodominant region, which in turn is fused to DNA encoding Region II-conty, flanking region. The Pro residue separating the Asp (at the C-terminal of the linker) from the Region II-conty. CS flanking region is an artifact of a filled-in BamHI site; the Gly separating the repeat units and the Region II-conty. CS flanking region is an artifact of a synthetic FokY/ThIII I linker. The peptide can be used in a vaccine for protection against malaria.

the P falciparum circumsporozoite (CS) protein [Dame et al., Science 225: 593 (1984)], and the influenza virus non-structural protein 1 (NS1), [Baez et al., Nucleic Acids Research, 8: 5845 (1980)]. The DNA encoding the 1st 81 AAs of the N-terminal of NS1 (NS1_81) is linked to a synthetic sequence encoding four repeat units from the immunodominant region, which in turn is linked via synthetic sequence to DNA encoding Region I contg. flanking region less the 18 AA signal region. This is linked to DNA encoding Region II-contg. flanking region. The Pro residue separating the Asp (at the C-terminal of the linker) from the Region II-contg. CS flanking region I and II-contg. CS flanking region is an artifact of a filled-in BamHI region is an artifact of a filled-in BamHI craft of the CS flanking region I and II-contg. CS flanking region is an artifact of a filled-in BamHI region is an artifact of a filled-in BamHI craft of a filled-
